Knowing these conventions enhances the ability to locate and identify components quickly.

Labels and Numbering Systems

Each component in the diagram is assigned a unique number or code. This labeling corresponds to a separate parts list or legend that identifies the part's name and ordering number. The numbering usually follows a logical sequence based on the assembly or area of the washer.

Exploded Views and Assembly Layouts

The parts diagram often uses exploded views, where parts are shown separated but aligned to illustrate their position relative to one another. This helps clarify how parts fit together during assembly and disassembly. Understanding exploded views is critical for repairs and replacements to ensure correct reassembly.

Symbols and Notations
