Graduate Education Requirements in Pediatric Occupational Therapy

After completing an appropriate undergraduate major, prospective pediatric occupational therapists must pursue graduate education to become licensed practitioners. The path typically involves obtaining a master's or doctoral degree in occupational therapy.

Master's Degree in Occupational Therapy

Most occupational therapy programs require applicants to have completed prerequisite coursework in areas such as biology, psychology, and anatomy. These programs offer specialized pediatric courses and clinical rotations that focus on children's developmental and therapeutic needs.

Doctorate in Occupational Therapy (OTD)

The OTD is increasingly becoming the standard for entry-level occupational therapy practitioners. Doctoral programs provide advanced training in pediatric assessments, intervention strategies, and research methods, preparing graduates for leadership roles in the field.

Accreditation and Licensing

Graduate programs need to be accredited by the Accreditation Council for Occupational Therapy Education (ACOTE). Graduates must also pass the National Board for Certification in Occupational Therapy (NBCOT) exam and meet state licensing requirements to practice pediatric occupational therapy.

Career Preparation and Certification Paths

Beyond academic preparation, aspiring pediatric occupational therapists must engage in clinical experiences, internships, and certification processes to establish their careers.

Fieldwork and Clinical Experience

Hands-on training in pediatric settings is essential. Graduate programs include Level I and Level II fieldwork experiences where students work directly with children under supervision, gaining practical skills and confidence.

National Certification

Passing the NBCOT exam grants the Registered Occupational Therapist (OTR) credential, which is mandatory for licensure and practice. Some therapists pursue additional pediatric specialty certifications to demonstrate expertise.

Continuing Education

Ongoing professional development ensures therapists stay current with advances in pediatric therapy techniques, technologies, and best practices, enhancing the quality of care provided to children.
