Examples of Math Questions of the Day by Grade Level

Providing examples tailored to various educational stages illustrates how math questions of the day can be adapted across grade levels. These samples cover fundamental to advanced concepts suitable for different ages.

Elementary School

Example: What is $7 + 8$? If you have 15 apples and give away 6, how many apples remain?

Middle School

Example: Solve for x : $3x + 5 = 20$. A rectangle has a length of 10 units and a width of 4 units. What is its perimeter?

High School

Example: If $f(x) = 2x^2 - 3x + 5$, find $f(3)$. Calculate the slope of the line passing through points $(2, 5)$ and $(6, 9)$.

Advanced/College Level

Example: Evaluate the integral $\int (2x^3 - 5x + 1) dx$. Determine the convergence of the series $\sum (1/n^2)$ from $n=1$ to infinity.
