 - Scalars
 - Vectors
 - Matrices
 - Strings
- Basic Operations: Matlab supports standard arithmetic operations:
 - Addition: `+`
 - Subtraction: `-`
 - Multiplication: `*` (matrix multiplication), `.*` (element-wise multiplication)
 - Division: `/` (matrix division), `./` (element-wise division)

3.2 Control Structures

Control structures in Matlab include:

- Conditional Statements: Using `if`, `elseif`, and `else` to execute code based on conditions.
- Loops: Implementing `for` and `while` loops for repetitive tasks.

Example of a simple `for` loop:

```
```matlab
for i = 1:10
disp(i);
end
```
```

3.3 Functions

Creating functions in Matlab allows for code reuse. A simple function definition:

```
```matlab
function output = myFunction(input)
output = input^2; % Returns the square of the input
end
```
```

4. Advanced Matlab Features

As you become familiar with Matlab, exploring its advanced features can enhance your programming skills.

4.1 Object-Oriented Programming (OOP)

Matlab supports OOP, allowing you to create classes and objects. This feature is helpful for modeling complex systems with multiple interacting components.
