Types of Test Questions

Medical surgical nursing tests can consist of various types of questions, including:

Multiple Choice Questions (MCQs)

These questions present a scenario or a clinical situation with several answer choices. The candidate must select the correct answer.

Example:

A nurse is caring for a postoperative patient who is complaining of severe abdominal pain. Which of the following interventions should the nurse implement first?

1. Assess the patient's vital signs
2. Administer prescribed pain medication
3. Notify the healthcare provider
4. Perform a focused abdominal assessment

Answer: 1. Assess the patient's vital signs

True or False Questions

These questions require candidates to determine the accuracy of a statement.

Example:

True or False: The primary goal of preoperative teaching is to alleviate anxiety and enhance patient cooperation.

Answer: True

Short Answer Questions

These require more detailed responses and often assess critical thinking or application of knowledge.

Example:

Describe the nursing interventions for a patient experiencing a postoperative infection.

Answer:

- Monitor vital signs for signs of infection (elevated temperature, increased heart rate)
- Assess the surgical site for redness, swelling, or drainage
- Administer prescribed antibiotics as ordered
- Educate the patient on signs of infection to report
