Karl Benz is credited with creating the first true automobile in 1886, the Benz Patent Motorwagen. Around the same time, Daimler and his engineer Wilhelm Maybach developed a lightweight internal combustion engine that could be fitted to a carriage, laying the groundwork for future automobiles.

Karl Benz and the Patent Motorwagen

Karl Benz's invention in 1886 is widely regarded as the world's first practical automobile. The Patent Motorwagen featured a single-cylinder four-stroke engine, a chassis designed specifically for motorized travel, and innovative mechanical components.
