1. Confusion with Signs

One of the most common difficulties is remembering the rules for multiplying and dividing integers, particularly regarding positive and negative signs.

- Positive $\times$ Positive = Positive
- Negative $\times$ Negative = Positive
- Positive $\times$ Negative = Negative
- Negative $\times$ Positive = Negative

Students should learn and practice these rules until they become second nature.

2. Mistakes in Computation

Calculating the products and quotients of integers can lead to simple arithmetic errors. Encourage students to double-check their work and to use scratch paper if necessary.

3. Application in Real-Life Scenarios
