Gems are one of the most versatile resources in New World. They can be embedded into gear, providing a range of benefits from increased damage to improved healing. The ability to customize your character and gear with gems makes them essential for players looking to optimize their builds.

Types of Gems

In New World, gems are classified into various types based on their color and the bonuses they provide. Each gem corresponds to a specific weapon and can be used to enhance specific attributes. Here's a breakdown of the types of gems available:

- **Diamond** - Increases damage and critical chance. Best suited for weapons that deal physical damage.

How to Obtain Gems

Gems can be found in various ways throughout New World. They are not only a reward from defeating enemies but can also be mined, purchased, or crafted. Here are the primary methods for obtaining gems:

1. **Mining:** Players can find gems while mining ore deposits. Specific mining locations have a higher chance of yielding gems.
2. **Defeating Enemies:** Certain enemies, particularly elite bosses and named creatures, have a chance to drop gems.
3. **Chests and Loot:** Exploring the world, players can find chests that contain gems among other treasures.
4. **Trading:** If you're short on gems, consider trading with other players. Gems can often be found on the trading posts.

Understanding where to look for gems is crucial for players who want to enhance their gear quickly.

Gem Crafting and Socketing

One of the most exciting aspects of gems in New World is the ability to craft and socket them into your equipment. This process allows for greater customization and optimization of your gear.

Crafting Gems

Crafting gems requires players to gather specific resources and use the appropriate crafting station. Here's a general outline of the crafting process:

1. **Gather Resources:** Depending on the gem, you will need various resources such as ore, rare items, and other crafting materials.
2. **Find a Crafting Station:** Gems are crafted at the Stonecutting station, which can be found in settlements.
3. **Use the Right Tools:** Players may need to have specific tools or perks to successfully craft gems.

Socketing Gems into Gear

To socket a gem into a piece of gear, players must follow these steps:

1. **Acquire a Piece of Gear with an Open Socket:** Only certain gear pieces can have gems socketed into them. Look for items that are marked with a socket symbol.
2. **Access the Inventory:** Open your inventory and select the gear piece you wish to enhance.
3. **Select the Gem:** Choose the gem you want to socket from your inventory.
4. **Confirm the Action:** Once the gem is selected, confirm the socketing action.

Keep in mind that once a gem is socketed, it cannot be retrieved without using a special consumable item, so choose wisely!
