The built-in speakers receive audio from the HDMI input. For devices connected via VGA, an external audio cable may be required to transmit sound to the monitor's speakers or external audio devices. The manual details the audio setup process and volume control through the OSD.

Troubleshooting Common Issues

The onn 22 monitor user manual includes a troubleshooting section to assist users in resolving frequent problems without needing professional service. This section covers symptoms, probable causes, and recommended solutions.

No Power or Display

If the monitor does not power on or display any image, check the power cable connection and ensure the outlet is functional. Confirm that the power button is pressed and that the device connected to the monitor is powered on. Resetting the monitor by unplugging and reconnecting the power supply can also help.

No Signal or Input Not Detected

This issue often arises from incorrect input source selection or loose video cables. Verify that the correct input (HDMI or VGA) is selected using the OSD menu. Inspect cables for damage and reconnect them securely. Restarting both the monitor and the source device may resolve signal detection problems.

Poor Image Quality or Distortion

Image issues such as blurriness, flickering, or color distortion may result from incorrect resolution settings or faulty cables. Ensure the source device output matches the monitor's native resolution of 1920x1080 at 60Hz. Replace cables if damage is suspected, and adjust picture settings via the OSD to optimize display quality.

Audio Problems

If no sound is heard from the monitor's speakers, confirm that the volume is not muted and is set to an audible level. For VGA connections, verify that an audio cable is connected from the source device to the monitor. Checking audio output settings on the source device can also resolve sound issues.

Maintenance and Safety Precautions

Proper care and adherence to safety guidelines extend the life of the ONN 22 monitor and ensure safe operation. This section outlines recommended maintenance practices and important precautions.

Cleaning and Care

To clean the monitor screen, use a soft, lint-free cloth slightly dampened with water or a screen-safe cleaner. Avoid harsh chemicals, abrasive materials, or spraying liquids directly onto the screen. Regular cleaning prevents dust buildup and maintains optimal picture clarity.

Safe Usage Guidelines

Place the monitor on a stable, flat surface away from direct sunlight, heat sources, and moisture. Ensure adequate ventilation to prevent overheating. Avoid exposing the monitor to excessive vibration or physical impact. Follow proper procedures for unplugging and reconnecting cables to prevent electrical hazards.

Storage and Transport

If storing or transporting the monitor, use the original packaging or suitable protective materials to prevent damage. Keep the device in a dry, temperature-controlled environment. Disconnect all cables before moving the monitor to avoid strain on connectors.
