Grading Techniques Using Gerber AccuMark

Grading is the process of scaling a base pattern to create a range of sizes. Gerber AccuMark's grading module automates this complex task, ensuring dimensional accuracy and consistent fit across all sizes. The software supports various grading rules and allows customization to accommodate different sizing standards and target markets.

Automated Grading Functions

Using predefined grading increments, the software applies size variations to the base pattern, adjusting lengths, widths, and other dimensions precisely. This automation reduces manual errors and accelerates the size development process. Additionally, the grading tool can handle multi-dimensional grading, which is essential for garments requiring proportional adjustments in multiple directions.

Custom Grading Rules and Standards

Gerber AccuMark allows users to create and modify grading rules to align with specific brand sizing charts or regional standards. This flexibility ensures that garments fit target consumers accurately. The system also supports grading for specialized apparel such as children's wear, athletic gear, and plus sizes, where proportion adjustments differ significantly from standard adult sizes.

Benefits of Digital Patternmaking and Grading

Transitioning from manual to digital patternmaking and grading using Gerber AccuMark pattern design software offers numerous advantages for apparel manufacturers and designers. These benefits improve overall productivity, reduce costs, and enhance product quality.

Enhanced Accuracy and Consistency

Digital tools eliminate many sources of human error inherent in manual patternmaking. Precise measurements and automated grading ensure that patterns maintain consistent proportions, improving garment fit across all sizes. This consistency is critical for brand reputation and customer satisfaction.

Time and Cost Efficiency

Automation of grading and pattern adjustments significantly reduces the time required for pattern development. Faster turnaround times enable companies to respond quickly to market trends. Moreover, digital marker making minimizes fabric wastage, lowering material costs and supporting sustainable manufacturing practices.
