Examples of Photosynthesis Worksheet Answers

Providing examples of answers from a photosynthesis worksheet answer key helps illustrate the level of detail and accuracy expected. Below are sample answers to common worksheet questions.

Sample Answer: Definition of Photosynthesis

Photosynthesis is the process by which green plants, algae, and some bacteria convert light energy, usually from the sun, into chemical energy stored in glucose. This process involves the intake of carbon dioxide and water and produces oxygen as a byproduct.

Sample Answer: Photosynthesis Chemical Equation

The balanced chemical equation for photosynthesis is:

Sample Answer: Role of Chlorophyll

Chlorophyll is the green pigment found in chloroplasts that absorbs light energy necessary for photosynthesis. It primarily absorbs blue and red wavelengths of light and reflects green, which gives plants their green color.

Sample Answer: Main Stages of Photosynthesis

The two main stages of photosynthesis are the light-dependent reactions and the Calvin cycle (light-independent reactions). During the light-dependent reactions, light energy is converted into chemical energy (ATP and NADPH). In the Calvin cycle, this chemical energy is used to synthesize glucose from carbon dioxide.
