Product Overview of Promogran Prisma

Promogran Prisma is a sterile wound dressing comprised of a unique matrix that combines collagen and oxidized regenerated cellulose. This bioactive composition interacts with wound exudate to form a gel that helps modulate proteases, essential enzymes that can impair wound healing if present in excess. The dressing is designed to maintain a moist wound environment, absorb exudate, and protect the wound bed from infection. Promogran Prisma is applicable for various types of chronic wounds, including diabetic foot ulcers, pressure ulcers, and venous leg ulcers, making it a versatile option in advanced wound care management.

Key Features and Benefits

Promogran Prisma offers several advantages that enhance wound healing:

- Bioactive matrix that regulates protease activity
- Maintains a moist wound environment conducive to repair

- Absorbs moderate to heavy exudate effectively
- Reduces pain and inflammation at the wound site
- Compatible with a variety of secondary dressings

Preparation Before Application

Proper preparation is critical to ensure the efficacy of promogran prisma and minimize the risk of contamination. Before applying the dressing, the wound must be thoroughly assessed and cleaned according to standard wound care protocols. This includes removing necrotic tissue and debris as necessary to create an optimal wound bed.

Wound Bed Preparation

Effective wound bed preparation involves:

- Cleaning the wound with sterile saline or an appropriate wound cleanser
- Debriding necrotic or non-viable tissue, either mechanically or enzymatically
- Ensuring hemostasis to control bleeding prior to dressing application
- Assessing the wound size, depth, and exudate levels to select the correct dressing size

Hand Hygiene and Equipment

Maintaining strict aseptic technique is essential when handling promogran prisma:

- Perform thorough hand washing or use alcohol-based hand sanitizer before and after dressing changes
- Wear sterile gloves when touching the wound or dressing
- Prepare all necessary supplies to avoid unnecessary movement during application

Step-by-Step Application Instructions

Following the correct application procedure for promogran prisma is crucial for

maximizing its therapeutic effects and ensuring patient comfort. The dressing is designed for direct contact with the wound bed and must be applied carefully.

Application Procedure

1. Open the sterile packaging and remove the promogran prisma dressing using aseptic technique.
2. Cut the dressing to fit the wound dimensions if necessary, avoiding excess material overlapping healthy skin.
3. Apply the dressing gently onto the wound bed, ensuring full contact with the wound surface.
4. Do not stretch the dressing during application to prevent discomfort and maintain integrity.
5. Cover the promogran prisma with an appropriate secondary dressing, such as a foam or gauze dressing, to secure in place and absorb excess exudate.
6. Apply a bandage or fixation method to keep the dressing stable and protect the wound area.

Frequency of Dressing Changes

The frequency of dressing changes depends on the wound condition and exudate levels. Generally, promogran prisma can remain in place for up to 7 days; however, more frequent changes may be necessary if heavy exudate or infection is present. It is important to monitor the wound regularly and adjust dressing intervals accordingly.

Aftercare and Dressing Changes

Proper aftercare following the initial application of promogran prisma is essential to support ongoing wound healing and prevent complications. Regular wound assessment and appropriate dressing management play a key role in treatment success.

Wound Monitoring

Healthcare providers should monitor the wound for signs of healing progress or potential issues, including:

- Reduction in wound size and depth

- Decreased exudate and absence of malodor
- Healthy granulation tissue formation
- Signs of infection such as increased redness, swelling, or pain

Changing the Dressing

When changing promogran prisma dressings, the following steps are recommended:

1. Wash hands and put on sterile gloves.
2. Gently remove the secondary dressing and then the promogran prisma dressing from the wound.
3. Inspect the wound and clean with sterile saline if necessary.
4. Apply a new promogran prisma dressing according to the application instructions.
5. Secure with an appropriate secondary dressing and bandage.

Precautions and Contraindications

While promogran prisma is effective for many chronic wounds, certain precautions and contraindications should be observed to ensure patient safety.

Contraindications

Promogran prisma should not be used in the following cases:

- Patients with known hypersensitivity to any components of the dressing
- Wounds with active bleeding or severe infection requiring systemic treatment
- Third-degree burns or wounds with exposed bone or tendon without appropriate medical supervision

Precautions

Additional considerations include:

- Use caution in patients with fragile skin to prevent trauma during dressing changes
- Monitor closely for allergic reactions or irritation
- Adjust dressing frequency based on wound exudate and clinical response
- Consult wound care specialists if healing does not progress as expected

Storage and Handling Guidelines

Proper storage and handling of promogran prisma are vital to maintain the product's sterility and functionality until the time of use.

Storage Conditions

- Store in a cool, dry place away from direct sunlight
- Keep the dressing in its original packaging until ready for application
- Maintain storage temperatures as recommended by the manufacturer, typically between 15°C and 30°C (59°F and 86°F)

Handling Instructions

Handle promogran prisma dressings carefully to avoid contamination or damage:

- Do not use if the packaging is damaged or opened prior to use
- Use aseptic technique when opening and applying the dressing
- Dispose of used dressings according to local medical waste regulations

Frequently Asked Questions

What is Promogran Prisma used for?

Promogran Prisma is a wound dressing designed to promote healing in chronic wounds such as diabetic foot ulcers, pressure ulcers, and venous leg ulcers by managing exudate and supporting tissue regeneration.
