Content Areas Covered

The Prophecy pharmacology exam encompasses several core content areas, including but not limited to:

1. Pharmacokinetics and Pharmacodynamics
 - Absorption, distribution, metabolism, and excretion (ADME) of drugs.
 - Mechanisms of action and therapeutic effects of medications.
2. Medication Administration
 - Routes of administration (oral, intravenous, intramuscular, subcutaneous, etc.).
 - Principles of correct dosage calculations and administration techniques.
3. Drug Classifications
 - Understanding various drug classes (antibiotics, antihypertensives, analgesics, etc.).
 - Recognizing indications, contraindications, and side effects associated with each class.
4. Patient Safety and Education
 - Strategies for minimizing medication errors.
 - Importance of patient education regarding drug therapy.
5. Pharmacological Interactions
 - Recognizing potential drug-drug, drug-food, and drug-disease interactions.
 - Understanding how to manage and mitigate these interactions.

Types of Questions on the Exam

Prophecy pharmacology exam questions are typically formatted in different styles to assess various

levels of understanding and application. Common question types include:

- Multiple Choice Questions (MCQs)
- Candidates are presented with a question and several answer options, where they must select the most appropriate response. For example:

What is the primary mechanism of action of ACE inhibitors?

- A. Vasodilation
- B. Inhibition of angiotensin-converting enzyme
- C. Blocking calcium channels
- D. Increasing heart rate

- Select All That Apply (SATA) Questions
- These questions require candidates to identify all correct answers from a list provided. For instance:

Which of the following are common side effects of opioids? (Select all that apply)

- A. Constipation
- B. Drowsiness
- C. Hypertension
- D. Nausea

- True/False Questions
- Candidates must determine the accuracy of a given statement. For example:

True or False: All antihypertensive medications should be taken on an empty stomach.

- Case Studies and Clinical Scenarios
- These questions present a clinical scenario requiring candidates to apply their pharmacological knowledge to make decisions about medication management.
