Understanding the PSM II Exam Structure

The PSM II exam is a rigorous assessment designed to evaluate an individual's advanced understanding of Scrum and their ability to apply Scrum principles in complex situations. The exam is typically taken online, allowing candidates worldwide to participate. It consists of multiple-choice and multiple-answer questions that test both theoretical knowledge and practical application.

The exam duration is generally around 90 minutes, during which candidates must answer approximately 30 questions. The passing score is often set at 85%, reflecting the exam's challenging nature. This high standard ensures that only those with a deep comprehension of Scrum and its nuances earn the certification.

Exam Format and Timing

The PSM II exam questions are presented in a timed, closed-book format. Candidates cannot refer to external materials once the exam begins, emphasizing the importance of thorough preparation beforehand. The time constraint encourages quick thinking and clear understanding of Scrum concepts.

Scoring and Passing Criteria

Each question on the PSM II exam carries equal weight. Because the exam includes multiple-answer questions, partial knowledge may not suffice; candidates must select all correct options to gain full credit. The scoring system is designed to reward comprehensive understanding and penalize guesswork.

Types of PSM II Exam Questions

PSM II exam questions are crafted to assess various dimensions of Scrum mastery, including practical application, problem-solving, and theoretical knowledge. Candidates encounter different question formats that require analytical thinking and decision-making skills.

Multiple-Answer Questions

Multiple-answer questions demand the selection of all correct options from a list, adding complexity. These questions often focus on scenarios where candidates must identify all Scrum practices or principles applicable to a given situation, reflecting real-world challenges.
