The Dot-Com Bubble (1999-2000)

Launched at the height of the dot-com boom, QQQ initially saw explosive growth. By the end of 1999, it had more than doubled in value. However, the subsequent bursting of the dot-com bubble in 2000 led to a severe decline in the stock chart, with QQQ losing nearly 80% of its value by October 2002.

Factors Contributing to Recovery:

- Emergence of New Technologies: Innovations in mobile computing, social media, and cloud computing helped propel tech stocks.

- Market Volatility: Extreme volatility characterized this period, leading to panic selling.
- Government Interventions: Stimulus measures and bailouts began to restore confidence in the markets.

Post-Crisis Bull Market (2009-2020)

The years following the financial crisis marked a historic bull market for QQQ. The ETF benefited from the rapid growth of technology companies, with major players like Apple, Amazon, and Alphabet leading the charge. By the end of 2020, QQQ had reached an all-time high of over \$300.
