Race, Class, and Gender in the United States: An Integrated Study is an academic anthology edited by Paula S. Rothenberg that explores the intricate intersections of race, class, and gender in American society. This compilation of essays and research examines how these social categories interact to shape individual experiences, social dynamics, and broader societal structures. In doing so, Rothenberg provides readers with a comprehensive understanding of the ways in which identity and power are constructed and experienced in the United States.

Understanding the Framework

Rothenberg's work is rooted in the idea that race, class, and gender are not standalone categories; rather, they are interconnected and mutually influential. This integrated approach allows for a more nuanced understanding of social issues, as it acknowledges that individuals often navigate multiple identities simultaneously.

Theoretical Foundations

The anthology draws on various theoretical perspectives to analyze the intersections of race, class, and gender. Some of the key frameworks include:

- **Intersectionality:** Coined by Kimberlé Crenshaw, this concept highlights how overlapping social identities can lead to unique forms of discrimination and privilege.
- **Social Constructionism:** This theory posits that social categories such as race and gender are not inherent, but rather created and maintained through social processes and institutions.
- **Critical Race Theory:** This framework examines the ways in which race and racism intersect with other forms of social stratification, emphasizing the need to consider race as a central factor in understanding inequality.
