Understanding the Fast Metabolism Diet

The fast metabolism diet, created by Haylie Pomroy, is based on the principle of boosting your metabolism through the consumption of specific foods at different times. The diet is divided into three phases, each lasting one week, with a focus on different food groups at each stage. Here's a brief overview:

- Phase 1 (Days 1-2): Focus on whole grains, fruits, and lean proteins. This phase is meant to reduce stress and increase insulin sensitivity.
- Phase 2 (Days 3-4): Emphasizes vegetables, lean proteins, and healthy fats. This phase is designed to build muscle and support fat loss.
- Phase 3 (Days 5-7): Incorporates healthy fats, fruits, and high-quality proteins. This phase is all about stabilizing your metabolism and feeding your body.
