Game Mechanics

The game comprises several key components that players must navigate:

1. **Article Selection:** Each game starts with a randomly selected article from various sources. The topics can range from science and history to pop culture and technology.
2. **Redaction Process:** A certain percentage of the article's words are redacted, making it challenging for players to piece together the context and meaning of the text.
3. **Guessing Words:** Players can input their guesses, and for each correct guess, the redacted word is revealed in the text. The game typically tracks the number of incorrect guesses as well.
